DAG – Directed Acyclic Graph

- XDAG is another innovation technology to solve problems

DAGGER
BY THE COMMUNITY

XDAG: A new DAG-based cryptocurrency

The first mineable DAG

No Pre-mine

No ICO

Community driven

D A G G E R
BY THE COMMUNITY

- DAG - Directed Acyclic Graph
- PoW
- Decentralized
- High TPS
- Block = Transaction = Address
- Blockchain tech friendly

XDAG

PoW: The Spirit of Blockchain

Simple Transaction case

- A1 A2 address
- M0 main block
- Tx1 transaction
- W witness block

Double spend 1

- double spend case on same node
- A1, A2 are wallet block
- Tx1, Tx2 are Tx from A1 to A2.
- Detected by ref orders directly.

Double spend 1

- double spend case on different nodes
- A1, A2 are wallet block
- Tx1, Tx2 are Tx from A1 to A2.
- Detected by ref orders and block difficulties.

High TPS

- each node process its transactions and construct self sub-DAG. Then merge them together through mined main blocks.

Community Driven

- No ICO, No Pre-mining, No investment, No capitals
- Community members are from different social channels
- Current developers are from different countries who never met each other

Current State

- Main net started since Jan 5th 2018
- Current release 0.3.0
- GUI wallet for Windows, Mac and Linux is Ready
- Android Wallet is Ready
- iOS Wallet is Ready
- RPC in Ready
- 10 exchanges listed XDAG

Next step

- Smart Contract
- Anonymous Trading
- Hash algorithm adjustment

How to Join & Help Community

Everyone related to XDAG is part of community

- Spread XDAG
- Discuss proposal
- Report issues
- Translation
- Contribute code
